IN THE CLAIMS:

Claims 1, 6-9 and 30 are amended herein. Claim 23 is canceled. All pending claims are produced below.

1. (Currenty Amended) A system for printing multimedia data, the system comprising:

a network including a printing system and a network device;

a network interface for receiving multimedia data from the network device;

a media processing system coupled to the network interface to receive the multimedia data and automatically detect coupling of a peripheral device, the media processing system determining a printed representation of the multimedia data and an electronic representation of the time-based multimedia data, wherein the media processing system resides at least in part on the printing system and at least in part on the network device and comprises an embedded multimedia server ;

a printed output system ~~in communication with~~ coupled to the multimedia processing system to receive the printed representation, the printed output system producing a corresponding printed output from the printed representation of the multimedia data; ~~and~~

an electronic output system ~~in communication with~~ coupled to the multimedia processing system to receive the electronic representation, the electronic output system producing a corresponding electronic output from the electronic representation of the multimedia data; and

a peripheral interface coupled to the multimedia processing system to communicate with the peripheral device.

2. (Original) The system of claim 1, wherein the network device is a personal computer.

3. (Original) The system of claim 1, wherein the network is a local area network.

4. (Original) The system of claim 1, further comprising:

a remote external service system coupled to the network, the external service system in communication with the media processing system for performing at least some processing steps for multimedia data.

5. (Original) The system of claim 3, wherein the external service system is coupled to the network by the Internet.

6. (Currently Amended) The system of claim 1, wherein the peripheral interface comprises a removable media storage reader.

7. (Currently Amended) The system of claim 1, wherein the peripheral interface comprises a media input device selected from a group consisting of: a DVD reader, a video cassette tape reader, a CD reader, an audio cassette tape reader, and a flash card reader.

8. (Currently Amended) The system of claim 1, wherein the external source is a media broadcaster, and wherein the peripheral interface comprises a media broadcast receiver that can be tuned to a media broadcast.

9. (Currently Amended) The system of claim 1, wherein the peripheral interface comprises an embedded receiver selected from a group consisting of: an embedded TV

receiver, an embedded radio receiver, an embedded short-wave radio receiver, an embedded satellite radio receiver, an embedded two-way radio, and an embedded cellular phone.

10. (Original) The system of claim 1, wherein the network device is a device selected from a group consisting of: an embedded heat sensor, an embedded humidity sensor, an embedded National Weather Service radio alert receiver, and an embedded TV Emergency Broadcast System (EBS) alert monitor.

11. (Original) The system of claim 1, wherein the network device comprises screen capture hardware.

12. (Original) The system of claim 1, wherein the network device comprises an ultrasonic pen capture device.

13. (Original) The system of claim 1, wherein the network device comprises a video recorder, wherein the external source of media is a series of images captured by the video recorder, converted into an electrical format, and then provided to the media processing system.

14. (Original) The system of claim 1, wherein the network device comprises an audio recorder, wherein the external source of media is a series of sounds that are converted into an electrical format by the audio recorder and then provided to the media processing system.

15. (Original) The system of claim 1, wherein the electronic output system is configured to write the electronic representation to a removable media storage device

16. (Original) The system of claim 15, wherein the removable storage device is selected from a group consisting of: a DVD, a video cassette tape, a CD, an audio cassette tape, a flash card, a computer disk, an SD disk, and a computer-readable medium.

17. (Original) The system of claim 1, wherein the electronic output system comprises a handling mechanism to accommodate a plurality of removable storage devices.

18. (Original) The system of claim 17, wherein the handling mechanism is selected from a group consisting of: a feeder, a bandolier, and a tray.

19. (Original) The system of claim 1, wherein the electronic output system comprises a media writer selected from a group consisting of: a disposable media writer and a self-destructing media writer.

20. (Original) The system of claim 1, wherein the electronic output system is coupled to a speaker system and sends an audio signal to the speaker system.

21. (Original) The system of claim 20, wherein the electronic output system comprises an embedded sound player for generating the audio signal.

22. (Original) The system of claim 1, wherein the electronic output system comprises a web page display.

23. (Canceled)

24. (Original) The system of claim 1, wherein the media processing system comprises an audio encryption module.

25. (Original) he system of claim 1, wherein the media processing system comprises a video encryption module.

26. (Original) The system of claim 1, wherein the media processing system comprises an audio sound localization module.

27. (Original) The system of claim 1, wherein the media processing system comprises a video motion detection module.

28. (Original) The system of claim 1, wherein the network device includes a user interface that provides information to a user about at least one of the printed representation and the electronic representation of the multimedia data, the user interface further accepting input from a user to cause the media processing system to modify at least one of the printed representation and the electronic representation of the multimedia data.

29. (Original) The system of claim 1, wherein the media processing system determines at least one of the printed representation and the electronic representation with assistance from a networked computing device.

30. (Currently Amended) A method for printing multimedia data, the method comprising:

receiving multimedia data from a network device via a network;

processing the multimedia data to determine a printed representation of the multimedia data and an electronic representation of the multimedia data, the processing performed at least in part within a printing system and in part within the network device;

producing a printed output that corresponds to the printed representation of the multimedia data; ~~and~~

producing an electronic output that corresponds to the electronic representation of the multimedia data; and

automatically detecting and communicating with a peripheral device.

31. (Original) The method of claim 30, wherein the electronic output is stored on a media recorder.

32. (Original) The method of claim 30, wherein the electronic output is stored on a removable storage device.

33. (Original) The method of claim 32, wherein the removable storage device is a DVD.

34. (Original) The method of claim 32 wherein the removable storage device is a CD-ROM.

35. (Original) The method of claim 32 wherein the removable storage device is an audio cassette tape.

36. (Original) The method of claim 32 wherein the removable storage device is a video tape.

37. (Original) The method of claim 32 wherein the removable storage device is a flash card.

38. (Original) The method of claim 32 wherein the removable storage device is a memory stick.

39. (Original) The method of claim 32 wherein the removable storage device is a

computer disk.

40. (Original) he method of claim 30, wherein the network device includes a cellular telephone.

41. (Original) The method of claim 30, wherein the network device includes a video camcorder.

42. (Original) The method of claim 30, wherein the network device comprises a digital audio recorder.

43. (Original) The method of claim 30, wherein the network device includes a DVD reader.

44. (Original) The method of claim 30, wherein the network device includes a video cassette tape reader.

45. (Original) The method of claim 30, wherein the network device includes a CD reader.

46. (Original) The method of claim 30, wherein the network device includes an audio cassette tape reader.

47. (Original) he method of claim 30, wherein the network device includes a flash card reader.

48. (Original) he method of claim 30, wherein the network device includes a digital video recorder.

49. (Original) The method of claim 30, wherein the network device includes a video capture device.

50. (Original) The method of claim 30, wherein the network device includes a meeting recorder.
